77) Simplify algebraic expression

$$(10x + 6x) - (32x \div 4 - 2x + 6x) =$$

a) Solve for $x = 1$ _____

b) Solve for $x = 0$ _____

c) Solve for $x = 2$ _____

78) Simplify algebraic expression

$$2x - 2x + (4x - 4x) \div (5x - x) =$$

a) Solve for $x = 4$ _____

b) Solve for $x = 6$ _____

c) Solve for $x = 3$ _____

79) Simplify algebraic expression

$$(3x - 3x) \div ((7x - 5x)) - 0 \div 6 =$$

a) Solve for $x = 3$ _____

b) Solve for $x = 0$ _____

c) Solve for $x = 4$ _____

80) Simplify algebraic expression

$$(4x - 4x) + 0x \div (3x \times 6) \div (12x) =$$

a) Solve for $x = 7$ _____

b) Solve for $x = 4$ _____

c) Solve for $x = 10$ _____
